This conference calendar is for information purposes only.

## About Gentigel

### *Aiming to solve a public health issue.*

Among the 300 million women around the world currently infected with HPV, 500,000 new cases of cervical cancer are identified each year and 275,000 women succumb to the disease. 70% of cervical cancer cases are caused by 2 HPV types and Gentigel aims to eliminate them at an early stage with GTL001, its first-in-class immunotherapeutic candidate. The company has already completed patient recruitment for the phase 2 clinical trial of GTL001 in Europe.

### *Offering a promising technological platform.*

Gentigel's versatile platform, Vaxiclase, is ideally suited for the development of immunotherapies against multiple infectious or cancerous diseases. Gentigel's second candidate, GTL002, is a multivalent HPV immunotherapeutic candidate designed with Vaxiclase. It targets the six most relevant HPV types in terms of global epidemiology and is currently in preclinical development.

### *Focusing on value creation.*

Respectively, the peak sales potentials of GTL001 and GTL002 are estimated at over €1 billion and €2 billion per year. In addition to this attractive HPV product pipeline, Gentigel's versatile technological platform, Vaxiclase, has already generated significant interest in the pharmaceutical industry, as illustrated by the partnership agreement signed in 2015 with the Serum Institute of India Ltd. (SIIIL), the world's largest producer of vaccine doses. This partnership could generate up to \$57 million in revenues for Gentigel, before royalties on sales. It will enable SIIIL to develop acellular multivalent combination vaccines against a variety of infectious diseases, including whooping cough.
